

## TECHINICAL DATA SHEET HIP SUPPORT TRAY

**The Universal Hip Support Tray** has been designed to Support hip tiles along the hip line of the roof, without the need for mixing and carrying mortar to bed down the cut hip tiles. This provides a neat and level hip line when fixing the dry hip ridge tiles into position.

The Hip Support Tray is a Dry Fix Product, and provides a secure and discreet solution once installed, and does not detract from the aesthetics of the roof.

SIZE	1200mm Long
MATERIAL	Re-constituted pvc
PACK SIZE	Pack of 10; Pallet of 500
WEIGHT	Pack of 10: 6kg
BENEFITS	Lightweight, quick & easy to install; durable; a dry fix product; no need for mortar.

**Installation:** The roof is tiled on both sides of the hip as normal. Smaller cuts of tiles are secured by using our recommended **Tile Clips**. Starting at the eaves, roll out the **Dry Ridge Roll** centrally along the entire hip, neatly trimming the roll at the eaves, and tacking the roll at 500mm intervals using galvanised staples or felt nails. The protective tape is removed from the underside of the corrugated edge of the roll, and the butyl adhesive is pushed onto the tiles, which moulds to the profile of the tile, ensuring the vent roll is securely sealed along the entire hip on both sides.

**The Hip Support Tray** is trimmed at the eaves to suit the overhang of the bottom course of tiles or slates, and secured in place using suitable nails. Continue up the hip with the remaining trays, overlapping by 100mm at each join.

Once all the hip trays are in position, the hip ridges can be secured in place, following the smooth line of the **Hip Support Trays**.

**The Hip Support Tray** is used with the **Universal Dry Ridge System**, as well as most other similar hip kits on the market

**The product** comes in bundles of 10 and measures 1200mm, which proves easy to store and transport

Once used the **Hip support Tray**, similar to the **felt support tray**, will be a product which roofing contractors will continually use on all hips.
